

# User manual for PA1

20181016 권용민

## 1. Creation

As written in the specification, through right button click, you can make a teapot object at the origin of each coordinate.

## 2. Selection

If you want to select a certain object, you can just click it. Clicking can be operated multiple times. If you want to cancel all selection, just click empty area which is not representing any object.

## 3. Object Operation

Object operations are working as same as assignment specification.

Direction of all operation is defined by the trajectory of mouse movement. It does not care the previous rotation transformation.
