User manual for PA2

20181016 권용민

In PA2, whole interfaces work only if current sub window is 5. So, if it doesn't work, please make sub window 5 as current sub window.

User Interface

1. Scene rotation
   In Sub window 5, if you drag with mouse left button, scene will rotate. (Actually, it works weird. I think rotation matrix is correct, but I don't know why it works weird.)
2. Scaling
   With + button and – button in keyboard, you can zoom in/out the scene.
3. Panning
   By dragging with mouse right button, scene will pan.
4. fov (field of view) change
   With arrow up and down key, you can change fov.
5. Camera reset
   Press d, camera view will reset to start view.
6. Projection reset
   Press 0, camera projection will reset to orthographic projection.
7. Window resize
   It supports window resize with no camera view change.

➢ I could not do task 5.
